

Energy Program

Energy Program

-

Launched in 2008, OCP's new industrial development strategy aims at doubling the Group's mining capacity and trebling its processing capacity by 2028. This plan, supported by an investment of more than \$21B, aims to meet the world's major agricultural challenges while preserving the environment.

Fully aware of the increasing needs of its industry on energy resource use, OCP Group has put forward a responsible and innovative Energy Program.
